

MD WASIM ALAM

+91-8697713882 ✉ wasim.iitdelhi@gmail.com  

Education

Indian Institute Of Technology(IIT), Delhi

Dec 2020 – April 2025

B.Tech + M.Tech in Chemical Engineering

(7.5/10)

Scholastic Achievements

Expert at Codeforces: Managed rating more than **1800+** on Codeforces.

Knight at LeetCode: Solved **850+** problems and achieved a rating of **1939**

Experience

Myntra Design Pvt. Ltd

July 2025 – Present

Full Stack

Bangalore

- **2FA-email verification:** Implemented end-to-end 2FA email/phone verification flow using React class-based component for web, in **Android** and **iOS** and made APIs, with OTP initiation/validation UIs with seamless client-side navigation
- **Backend verification:** Designed & implemented **backend APIs** with **URT** propagation for secure session flow across verification stages, Deployed feature flags, tenant-specific configurations with domain validation reduced fraud by **99.9%**
- **Nudges for Cart and Wishlist:** Enhanced a cross-platform cart and user-state persistence system with guest-to-login continuity using locally persisted **UIDs**, **auth listeners**, and a robust cart-merge flow having lifecycle-aware, frequency-controlled nudging logic with session re-entry detection with native UI interventions (**Android** and **iOS**) deep-linked checkout, enabling intelligent checkout nudges increasing user interaction time by **40%**
- **Dynamic Configuration Control System:** Developed a cross-platform configuration override system with real-time schema validation, searchable key selection with duplicate detection via a dictionary, keyboard-aware full-screen dialogs, and persistent storage on **Android** and **iOS** reducing developer configuration testing time by **90%**
- **Myntra QwikCilver:** Integrated SuperGC multi-brand gift cards into Myntra's gift card ecosystem, enabling users to add and activate QwikCilver-issued cards across partner platforms by invoking **QwikCilver APIs** for balance checks, configuring credentials against staging servers, and ensuring secure validation, enabling UAT testing

Attero | AI Engineer Intern

May 2024 – August 2024

AI Engineer Intern

Noida, India

- Implemented **Vision Transformer** using **TensorFlow** for advanced e-waste classification, leveraging custom libraries
- Used the shifted patch **tokens**, patch encoding in ViT, optimized positional encoding with local information processing
- Incorporated **MLP** layers, locally-aware, self-attention with Softmax-enhanced performance, resulting **84%** accuracy
- Fine-tuned hyperparameters using ImageNet and E-waste12 datasets, visualizing augmented images and model pipeline

Projects

ReviewIQ pipeline | HackerRamp'25 Myntra

November 2025

- Engineered a data ingestion pipeline integrating Google Play Store API, App Store APIs, and in-app review sources
- Implemented a Fetcher service and a **CRON**-based orchestration layer for automated daily ETL and anomaly detection
- Developed a dashboard assisted with chatbot for insights for large data via **tool-calling**, reduced the query time **93%**
- Added Bifrost data sources, categorization and sentiment analysis for structured classification of feedback reducing the manual review sorting effort (4 hours weekly) almost **99.9%**

Graph Neural Network for Glaucoma Detection | Graph Neural Networks

Jan 2025 -Apr 2025

- Architected an **encoder-decoder** convolutional network for optic disc(OD) segmentation with learning rate of **0.001**
- Implemented a neural network for optic segmentation using **RFM**, **mean aggregation**, and feature masking techniques
- Applied a Channel Fusion algorithm leveraging **Discrete Cosine Transform(DCT)** and DSC as evaluation metrics
- Achieved segmentation performance exceeding 90% across all evaluation metrics.

Credit Card Fraud Detection | Python, Machine Learning

August 2023 – December 2023

- Performed exploratory data analysis and applied **SMOTE** to address class imbalance and uncertainty in transaction
- Achieved an average **ROC-AUC score** of **0.93** using logistic regression, KNN, decision tree and **XGboost** classifiers
- Detected fraudulent transactions using anomaly detection algorithms including Isolation Forest and Local Outlier Factor

Retrieval-Augmented Generation ChatBot

April 2023

- Built an end-to-end **RAG** pipeline over a 750+ page, using PyPDF2 with pdfplumber fallback for context continuity
- Chunked & processed data with **LangChain**, generated MiniLM embeddings stored in Chroma-DB for efficient retrieval
- Integrated RetrievalQA (**Hugging Face**), boosted accuracy via multi-query retrieval, deduplication, and context tuning

Technical Skills

Programming Languages: Python, Java, C, C++, Go, JavaScript, SQL, Kotlin, Swift, React, React Native

Libraries: Scikit-learn, XGBoost, LightGBM, TensorFlow, Keras, PyTorch, Pandas, NumPy, SciPy, statsmodels

Developer Tools & Platforms: GitHub, Docker, Jenkins, Kubernetes, VS Code, Eclipse, **Android Studio**, Xcode

Leadership / Extracurricular

- **Leadership Roles:** Aquatics Captain' 2023 | Aquatics Vice-Captain' 2022 | Maintenance Committee Member'2022
- **Sports & Events:** IIT Delhi Hockey Team (Inter-Hostel Runner-Up) | Events & Operations Coordinator TRYST'23
- **Volunteering:** Office of Career Services | Manager, BloodConnect (Delhi Core Team) | Volunteer, ISRO Exhibition
- **Event Management:** Moderator, Guest Lecture at TRYST'23; Event Manager & Developer, ChEs Society' 23
