PROFESSIONAL SUMMARY

Senior Software Engineer from **IIT Delhi** with 3+ years of experience building scalable backend systems, APIs, cloud infrastructure, and deployment platforms. Experienced in Python, C++, FastAPI, Redis, Elasticsearch, Kafka, Kubernetes, Terraform, and Argo CD, with a focus on distributed systems, reliability, automation, and performance optimization.

WORK EXPERIENCE

Wells Fargo, Hyderabad

July 2023 - Present

• Senior Software Engineer | Backend & Platform Engineering

- * Designed and implemented a sliding-window-log **API rate limiter** backed by Redis, improving backend stability under high-load traffic and reducing quota-limit-exceeded failures by **20%**.
- * Built a **GitOps**-based model deployment pipeline on **OpenShift AI** using **Argo CD**, validating target clusters, hardware requirements, and existing deployments before triggering deployment from Git configuration changes.
- * Deployed and optimized high-performance inference services on **Kubernetes and Run:ai**, tuning serving configurations and resource allocation to improve **throughput** and **latency** for production workloads.
- * Developed two testbeds for deployed inference workloads, validating production readiness against **sub-10-second** latency requirements and enabling performance and reliability testing across model-serving deployments.
- * Implemented end-to-end **observability and tracing** for production workflows using Arize, improving monitoring, debugging, and root-cause analysis across distributed service executions.

• Software Development Engineer | Backend & Platform Engineering

- * Developed a production validation platform to verify client loan records against master databases, reducing validation turnaround time and operational costs by **30%**; the solution secured **\$4.8 million** in organizational funding and was recognized as a key contribution leading to my promotion to Senior Software Engineer.
- * Automated the migration of **Elasticsearch** indexes from **Gen1 to Gen2 ingestion APIs**, reducing manual migration effort and improving the maintainability of search and ingestion infrastructure.
- * Provisioned cloud infrastructure using **Terraform** and developed Python automation to orchestrate the provisioning of standardized project resources, reducing repetitive manual setup and improving consistency across environments.
- * Built an end-to-end document **ingestion and retrieval** system, integrating Document AI, BigQuery vector storage, vector indexing, reranking, grounding, and Gemini APIs to support scalable context-aware retrieval workflows.

ScrumDo LLC, Remote

June 2022 - July 2022

• Software Developer Intern | Application Development

- * Contributed to the deployment of the company's next-generation **application pipeline**, enabling seamless integration and delivery of key web-platform features within a **cross-platform** mobile application ecosystem.
- * Developed a **Flutter**-based cross-platform application with SQLite persistence, analytics dashboards, and backend integrations supporting core workflows for **1,000+ active users**.

EDUCATION

Indian Institute of Technology, Delhi

2019 - 2023

Bachelor of Technology in Civil Engineering

CGPA: 8.484/10

TECHNICAL SKILLS

Programming Languages: C++, Python, SQL

Frameworks/Libraries: FastAPI, Boto3, Google Cloud Client Libraries

Infrastructure/Tools: Redis, Elasticsearch, Kafka, Oracle DB, GCP, Kubernetes, OpenShift AI, Terraform, Argo CD, Git

Backend & System Design: REST APIs, Microservices, Distributed Systems, Rate Limiting, Caching, API Design, Design Patterns, Reliability & Scalability, GitOps, CI/CD
